

**January 15, 2016 – Skyway constructs two towers on Amelia Island, FL serving the suburban and resort communities**

After concerned citizens on Amelia Island contacted Skyway Towers seeking help to improve cellphone coverage on the island, Skyway worked in concert with local government officials, Omni Amelia Island Plantation & Resort management, wireless carrier RF engineers, the tourism board and the homeowners association to find common ground for the best site locations and tower design. Upon completion of this concerted effort, the towers received unanimous zoning approval by Nassau County officials. The two towers are now providing significantly improved cell coverage from multiple carriers to the resorts, hotels and homes located at the central and south ends of the island, as well as IOT service to local golf courses.

**About Skyway Towers, LLC**

Skyway Towers, a leading wireless communications tower developer with 385 towers in the air and more than 200 tower locations under development across the US for fast and easy collocation, was founded by a management team with roots in the wireless carrier industry. Skyway Towers is consistently recognized by its customers as the most responsive and streamlined tower company in the marketplace. The company understands the technical and time-sensitive nature of its customers' needs and strives to exceed expectations.
