

October 15, 2019 – Skyway constructs 35th new tower in Montana

Skyway Towers recently completed its 35th tower in the state of Montana, increasing its Mountain Region portfolio to more than 75 towers. This tower project, as well as 30 newly constructed towers across Wyoming and Colorado, primarily cover rural underserved areas. This portion of the Skyway portfolio is positioned well to serve the national carriers with highway corridor and small community coverage as well as increased tower locations for local carriers, first responders and WISPs. “With the weather and terrain challenges that come with building in Montana, it comes with great pride to hit such a milestone in just over a two year period” said Tom Cureton the Director of Development for Skyway Towers.

About Skyway Towers, LLC

Skyway Towers, a leading wireless communications tower developer with 385 towers in the air and more than 200 tower locations under development across the US for fast and easy collocation, was founded by a management team with roots in the wireless carrier industry. Skyway Towers is consistently recognized by its customers as the most responsive and streamlined tower company in the marketplace. The company understands the technical and time-sensitive nature of its customers’ needs and strives to exceed expectations. For more information, visit www.skywaytowers.com.
